

EREF Municipal Solid Waste eTextbook

Educational Modules Table of Contents

1 Introduction to Solid Waste Management

- 1.1. What is Solid Waste?
- 1.2. Solid Waste Management Systems
- 1.3. Waste Generation and Characteristics
- 1.4. Reduce, Reuse and Recycle
- 1.5. Circular Economy
- 1.6. Composting
- 1.7. Thermal Conversion
- 1.8. Landfills
- 1.9. Leachate
- 1.10. Landfill Gas
- 1.11. Critical Thinking Questions

2 Waste Generation and Characterization

- 2.1. Defining Municipal Solid Waste
- 2.2. Measuring Generation
- 2.3. Municipal Solid Waste Data Sources
 - 2.3.1. Material Flow
 - 2.3.2. State Data Surveys
 - 2.3.3. Facility Data Surveys
- 2.4. Generated, Landfilled and Diverted Wastes
- 2.5. Municipal Solid Waste Composition
- 2.6. Municipal Solid Waste Physical and Chemical Properties
- 2.7. Critical Thinking Questions

3 Solid Waste Collection

- 3.1. Brief Introduction to Solid Waste Collection
- 3.2. Public vs. Private Collection
- 3.3. Characterize and Model Solid Waste Collection Activities
 - 3.3.1. Types of Collection Systems and Vehicles
 - 3.3.2. Modeling of Solid Waste Collection
- 3.4. Alternative Fuels and Emissions from Solid Waste
 - 3.4.1. Collection
 - 3.4.2. Emission Regulations
- 3.5. Waste Collection Trends and Challenges

4 Material Recovery Facilities

- 4.1. Introduction
- 4.2. Types of Material Recovery Facilities
 - 4.2.1. Citizen Drop-Off Center
 - 4.2.2. Single and Dual Stream Recycling
- 4.3. Facility Design and Equipment
- 4.4. Critical Thinking Questions

5 Landfills

- 5.1. Brief Introduction to Landfills
- 5.2. Types of Landfills
 - 5.2.1. Monofills
 - 5.2.2. Conventional
 - 5.2.3. Bioreactor
 - 5.2.4. Mechanical Biological Pretreatment
 - 5.2.5. Construction and Demolition
- 5.3. Organics Decomposition
- 5.4. Leachate
- 5.5. Gas Production
- 5.6. Siting a Landfill
- 5.7. Landfill Infrastructure, Layout and Operation
- 5.8. Post-Closure Care
- 5.9. Critical Thinking Questions

6 Leachate

- 6.1. Leachate Generation, Quantity and Quality
- 6.2. Leachate Treatment
- 6.3. Leachate Collection and Liner System Design
- 6.4. Landfill Final Covers
- 6.5. Critical Thinking Questions

EREF Municipal Solid Waste eTextbook

Education Modules Table of Contents

7 Landfill Gas

- 7.1. Landfill Gas Fundamentals
- 7.2. Landfill Gas Production Mechanisms and Modeling
- 7.3. First-order Landfill Generation Model Derivation
- 7.4. How to Calculate Landfill Gas Generation Rates
- 7.5. Gas Collection Efficiency
- 7.6. Greenhouse Gases Equivalencies Calculator
- 7.7. Landfill Gas Collection System Design
 - 7.7.1. Landfill Gas Collection System Components
 - 7.7.2. Gas Collection and Control System Construction
- 7.8. Critical Thinking Questions

8 Anaerobic Digestion

- 8.1. Introduction to Anaerobic Digestion
- 8.2. History and Current State of Anaerobic Digestion
- 8.3. Overview of Anaerobic Digestion Processes
- 8.4. Biogas Composition, Generation and Electricity Production
- 8.5. Types of Anaerobic Digestion Systems
- 8.6. Critical Thinking Questions

9 Thermal Conversion Processes

- 9.1. What is Thermal Conversion?
- 9.2. Thermal Conversion Techniques
- 9.3. Waste Chemical Properties
- 9.4. Waste to Energy
- 9.5. Gasification and Pyrolysis
- 9.6. Hydrothermal Carbonization
- 9.7. Thermal Conversion Emissions
- 9.8. Critical Thinking Questions

10 Sustainable Solid Waste Management

- 10.1. Sustainable Waste Management Fundamentals
- 10.2. Sustainability Principles
 - 10.2.1. Zero Waste
 - 10.2.2. Cradle to Grave
 - 10.2.3. Sustainable Material and Energy Flows
- 10.3. Waste Management Hierarchy Application
 - 10.3.1. Waste Minimization and Reuse
 - 10.3.2. Pay-as-You-Throw
- 10.4. Sustainable Waste Management Case Studies
 - 10.4.1. Evaluation Tools
 - 10.4.2. Case Studies

TEACHING FLEXIBILITY

The flexibility of EREF's eTextbook equips instructors to meet their teaching goals. Utilize the content in its entirety or choose the modules that align with course topics.
